No More Acids

for Warts, Corns and
Skin Tags Treatment

Why Wartan Cream?

- **Wartan Cream** is the first approved natural product in the Jordanian market that works directly against Human Papillomavirus (HPV) and the elements that cause abnormal cell growth.
- **Wartan Cream** is effectively and safely used for genital warts without any harmful side effects to the surrounded skin.
- **Wartan Cream** is an international patented formula for warts, corns, and skin tags treatment.
- **Wartan Cream** does not contain any acids, so it is safe, and can be used in any case, in addition to its safety profile.
- **Wartan Cream** is available in affordable price and convenient dosage form.

Main Ingredients

	Herbal Name	Activity	Main active constituents	Mechanism of action
	Tea tree oil	Antiviral	Terpinen-4-ol	Affects the virus regular replication processes and other processes
	Thuja Occidentalis	Antiviral action and immunopharmacological potential	Thujone	Affects cytokine, antibodies production, also it affects the activation of macrophages and other immunocompetent cells
	Bloodroot	Anti-cancer and antiviral	Sanguinarine	Kills Human Papilloma virus and the epidermoid carcinoma A431 cells by induction of apoptosis
	Chaparral	Anti-cancer	Nordihydroguaiaretic acid (NDGA)	Blocks cellular respiration by inhibiting enzymes, such as: receptor tyrosine kinases that are often overexpressed in certain cancers.
	Lemon peel oil	Prevents the development of abnormal growths on the skin	Limonene	Mechanism of action still unknown
	Apple cider vinegar	Direct effect on (HPV) structure and activity	Acetic Acid	Scatters the light that is needed for HPV replication.
